

Layouts, Theme Colours, Theme Fonts

Layouts

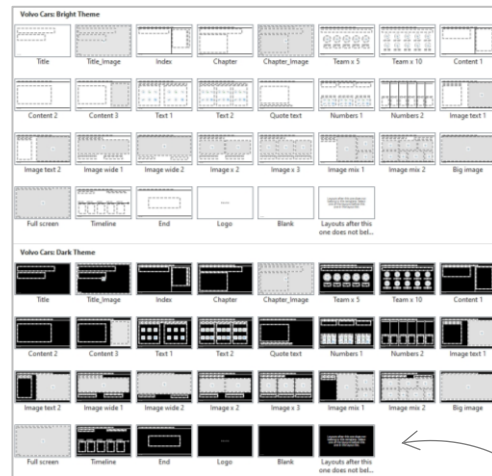

Layouts are the backbone of the template. Each page has a layout applied, and this layout governs where specific content should be located on the page using *placeholders*.

Change layout on the selected page.

- Restore layout on the selected page.

Existing layouts

Layouts that come after this one do not belong to this template.

What are theme colours?

Theme colours are the colour palette specifically set for your template.

The first four colours to the left (white, black, light grey, and dark grey) are used for text and background.

The fifth and eighth colours (blue and orange) are the main accent colours. The remaining colours on the same row (circled in green) belong to Volvo Cars' official colour palette.

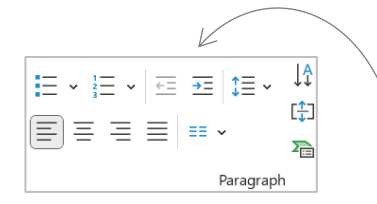

The other colours below (circled in red) are automatically generated by Office and cannot be customised. These shades do not belong to Volvo Cars' palette. Please refer to the Brand Identity guidelines for the correct colour codes.

We do not use the Office Standard colours.

What is text formatting?

Text formatting refers to various styles applied to text in the template, such as *heading*, *subheading*, and the different list levels in a *bulleted list*. In the template, they are tailored to your specific guidelines, so use them as they are set.

When you want to increase or decrease the list level in a bulleted list, use the *Increase list level / Indent more button* (arrow pointing right) or the *Decrease list level / Indent less button* (arrow pointing left) in the *Paragraph* section of the menu.

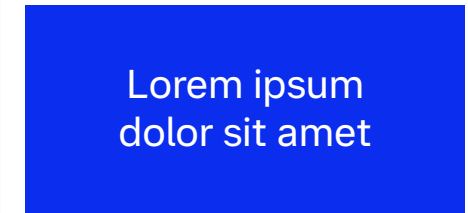

Tip:

The buttons have an arrow pointing right or left next to a list symbol – this helps you find the correct ones.

Lines and shapes

Standard for *Shape* in this template.

Default for *Textbox* in this template.

Default for *Line* in this template.

Instructions

Images and Video

Insert and work with images

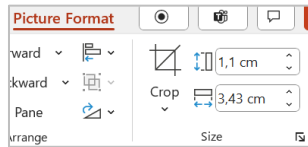

Insert an image by clicking on the image icon in the middle of the *image placeholder*.

Note! Avoid inserting an image in a *multi-placeholder* (placeholder with more than one icon).

Crop images

Select the image and go to the *Picture Format* tab. Click on *Crop* at the far right in the menu tab area.

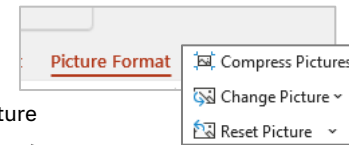

- Drag the black handles to crop the image.
- Drag the white circular handles to resize the image within the cropped area.

Try it yourself!

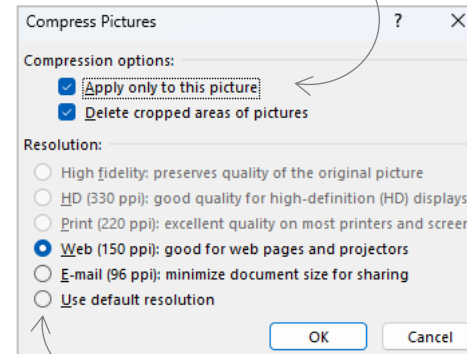

How do I compress images?

Heavy images can cause your presentation to lag and become slow. Make it a habit to compress images like this:

- Select the image and go to the *Picture Format* tab.
- Click on *Compress Pictures*. When you choose this, a dialog box will open. Now you can make your selections.

Uncheck *Use only on this picture* if you want to compress all images in your presentation.

Choose the resolution you want to compress to.

Important!

Once you have compressed, you can not restore the images if needed; you will have to insert them again.

Try it yourself!

Insert and work with video

Insert a video by going to the *Insert* tab -> *Video*.

Choose whether you want to insert the video from a local source (This Device...) or from an online source (Stock Videos... or another video service like YouTube).

When you have inserted the video, it can be cropped just like an image:

With the video selected, go to the *Video Format* tab -> *Crop*.

Under the *Playback* tab, there are options for how the video should start (on *click* or *automatically*), checkboxes for whether the video should loop infinitely, and other useful controls.

Working with Presentations

How do I edit the header and footer?

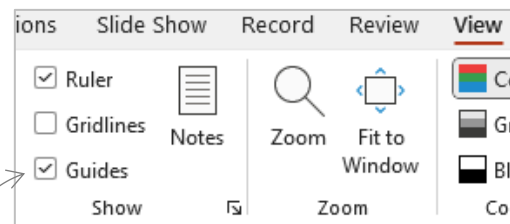

Under the **Insert** tab, you'll find **Header and Footer**. When you click here, a dialog box opens with various options for editing the header and footer. If you want your changes to apply to all layouts, choose *Apply to All*. If you only want to change the page you're on, select *Apply*.

Try it yourself!

How do I display guides?

The template's guides are valuable tools for organizing content in your presentation, such as aligning objects, images, and text boxes

Check *Guides* under the *View* tab.

Try it yourself!

Can I paste a page from another template with different layouts?

Yes, however, the layout from the other template will be imported into the new template, and it can be confusing. Additionally, it requires that the page you are pasting has been created correctly – meaning that the correct placeholders have been used for the right type of content (which is a good reason to always use placeholders when available!).

Do you want to be sure it's done right? In that case, select each individual content item (header, text, image, etc.) and paste them separately into the correct placeholders in your new template.

Incorrect layouts

If you cut entire pages from one presentation to another, there is a risk that you may also bring along the *layout* of the old page. If this happens, the incorrect layout will end up last in the list, i.e., after the layout named "*Pages after this page...*". To correct this, you can apply a new layout to your pasted page. Then make sure that all content is placed in the correct placeholders in the new layout.

Layouts that come after this one do not belong to this template.

Save as PDF

Saving your document as a PDF is a good idea when emailing or sending it for review. The PDF format is not as heavy as a presentation file. However, keep in mind that embedded videos or animations will not be included in the PDF version.

- Go to *File* and click *Save As*.
- Click on the *File Format* dropdown and select *PDF*.
- Press *Save*.

Instructions

Working with Presentations

Extra gridlines

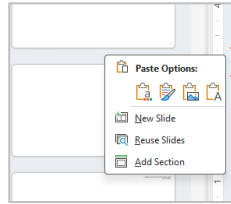

If you need to add extra grid lines to improve structure or alignment, always start from the 2x2 grid system.

- Add new lines only where needed for layout balance.
- All grid lines should always be set to 0.25 pt thickness.
- Only horizontal and vertical grid lines. This ensures that your layout remains consistent and aligned with the overall visual system.

Sections

Sections are a way to divide the presentation into separate parts for easier organization.

- Place the cursor in the left column where you want to insert your section.
- Right-click the cursor and select *Add Section*.

Once the sections are created, you can toggle them on and off to get a better overview of the presentation's content:

- ▶ **Instructions (7)**
- ▶ Example slides (15)
- ▶ Presentation (3)

Notes

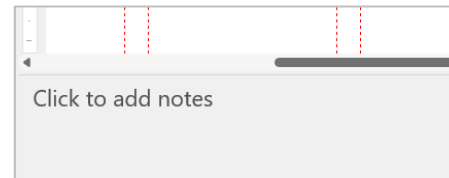

A presentation with too much content and large amounts of text on each slide can appear cluttered and become difficult to follow.

Scale down the amount of text displayed on the slide and place the original text in the *Notes*:

- Go to the *View* tab and click on *Notes*.

At the bottom of the window, *Notes* are displayed. Paste your content here:

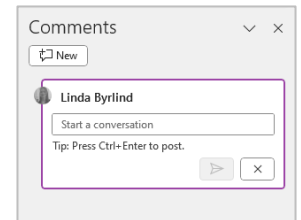

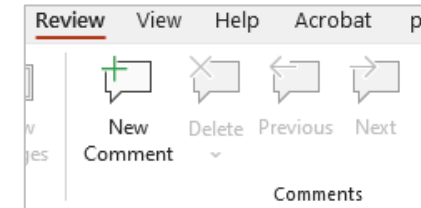

Text placed in *Notes* is also accessible to the presenter in *Presenter View*. It can be used as a script for each slide there.

Try it yourself!

Comments

Built into PowerPoint is the ability to add comments to slides.

- Go to the *Review* tab and click on *New Comment*.
- Fill in your comment in the panel on the right.
